PRICE LIST FORMAT

- A. Page Numbering** - Page numbers appear in the upper right corner of the page. Pages are numbered sequentially. However, new pages are occasionally added to the price list. When a new page is added between pages already in effect, a decimal is added. For example, a new page added between pages 14 and 15 would be 14.1.
- B. Page Revision Numbers** - Revision numbers also appear in the upper right corner of each page. These numbers are used to determine the most current page version on file with the Commission. For example, the 4th revised Page 14 cancels the 3rd revised Page 14. Because of the various suspension periods and deferrals the Commission follows in its tariff approval process, the most current page number on file with the Commission is not always the price list page in effect. Consult the check sheet for the page currently in effect.
- C. Paragraph Numbering Sequence** - There are nine levels of paragraph coding. Each level of coding is subservient to its next higher level:

2
2.1
2.1.1
2.1.1.A
2.1.1.A.1
2.1.1.A.1.(a)
2.1.1.A.1.(a).I
2.1.1.A.1.(a).I.(i)
2.1.1.A.1.(a).I.(i).(1)

- D. Check Sheets** - When a price list filing is made with the Commission an updated check sheet accompanies the filing. The check sheet lists the pages contained in the price list, with a cross reference to the current revision number. When new pages are added, the check sheet is changed to reflect the revision. All revisions made in a given filing are designated by an asterisk (*). There shall be no other symbols used on this page if these are the only changes made to it. The price list user should refer to the latest check sheet to find out if a particular page is the most current on file with the Commission.

SECTION 3 - RATES AND CHARGES - LONG DISTANCE (Continued)**3.5 Digital Private Line Service**

(T)

This service is no longer available to new Customers.

(M)

Rates for Digital Private Line Service are based on mileage between Carrier's Points-of-Presence (POPs) and on bandwidth. Mileage calculation follows the formula in Section 2.16. A complete private line circuit includes the following elements.

(T)

(T)

(M)

Inter Office Channel - POP to POP transport.

Local Access Facilities - access line on both the originating and terminating ends of the circuit.

Central Office Connection - on both the originating and terminating ends of the circuit.

Access Coordination Fee (Optional) - on both the originating and terminating ends of the circuit.

(M)

3.5.1 Inter Office Channel

3.5.5 Discount Plans

(T)

Carrier offers discounts based on the term of Customer's commitment to Carrier's service and based on Customer's total MRC volume of services ordered. To determine the applicable discount, add the MRCs (both fixed and mileage sensitive) for the inter office channel portion of all circuits ordered by Customer. Then, see the following tables to determine the minimum monthly revenue commitment level for Customer. Depending on the length of the term Customer has selected, the percentage discount will be applied to the inter office channel charges, by circuit type. For example, if Customer orders a DS-1 and a DS-3, totaling \$19,000 in MRCs, for a one-year term, the discount on the inter office channel portion of the DS-1 circuit will be 34%, and the discount on the inter office channel portion of the DS-3 will be 13%.

SECTION 3 - RATES AND CHARGES - LONG DISTANCE (Continued)**3.11 Digital Private Line II Service**

Unless otherwise noted, the following rates and charges will remain in effect for the term of Customer's contract.

Rates for Digital Private Line II Service are based on mileage between Carrier's Points-of-Presence (POPs) and bandwidth. A "full service" private line circuit includes the following elements: (T)

Transport - Interexchange carrier POP to interexchange carrier POP. (C)

Local Access Facilities - access line on both the originating and terminating ends of the circuit.

A. Transport (C)

Charges include a Nonrecurring Charge (NRC), and a Monthly Recurring Charge (MRC) that is either a minimum charge or a per mile rate, whichever is greater. Rates for mileage bands are based on a per circuit basis.

Service Type	NRC	MRC	Mileage Band	Per Mile Rate	
DDS 56 Kbps (T)	\$100.00	\$185.00	1 - 500 Miles	\$.67	(T)
			501 - 1000 Miles	.62

SECTION 3 - RATES AND CHARGES - LONG DISTANCE (Continued)**3.11 Digital Private Line II Service (Continued)****B. Local Access Facilities Charges**

(T)

- Access Coordination Fee (ACF) - Amount assessed per access circuit when Customer appoints Carrier as the single point of contact for their access. The ACF permits Carrier to recoup costs of designing and testing a circuit, generating and issuing Access Service Requests (ASRs), coordinating any other activity required to ensure timely installation. Additionally, the ACF assures Customer that Carrier will provide ongoing maintenance and trouble resolution for the life of the access arrangement. (N)
- Central Office Connection Fee (COC) - Designed to recover Carrier's investment in the digital cross-connect equipment necessary to provide service, to recover costs associated with the management and maintenance of equipment and Carrier's testing, wiring, and cross-connecting of the circuit. COC fee is assessed per access circuit.
- Entrance Facility Charge (EFC) - An access circuit that carries traffic from the Serving Wire Center (SWC) to Carrier's POP. Carrier does not own these facilities, but rather leases facilities from an access provider. Carrier charges EFC to recover costs when utilizing these facilities for a Customer Provided Access (CPA) service with an access provider. This charge is included in the full service circuit price. (N)
- Local Access Facilities - Carrier will setup access arrangements on behalf of Customer when full-service Digital Private Line II Service is purchased. Access facilities arranged by Carrier will be billed to Customer at Carrier's costs. Any special construction or non-standard charges assessed by the company supplying the local access will also be the responsibility of Customer. (T)

Carrier must also set up access arrangements on behalf of Customer as requested for services purchased. Any charges associated with provisioning of the access service, including but not limited to, local access charges, coordination charges, access service order charges, or any other charges associated with gaining access from Customer premise to the POP will be considered "Access Charges". This includes any NRCs incurred in association with obtaining access regardless of contract term. Any such charges as described above will be passed through to Customer in accordance with this Tariff.

D. Virtual Network-to-Network Interface (NNI) Port

For each Virtual NNI Port, a NRC and a MRC are applied per LATA, based on the Virtual NNI Port speed required. The Virtual NNI Port must be large enough to accommodate the cumulative egress of all PVCs connected to the NNI. It will be at least as large as the sum of the CIRs for all PVCs connected to it and at least as large as the largest User to Network Interface (UNI) port connected to it. The Virtual NNI Port should be approximately equal to or less than one third of the aggregate of the UNI port speeds connected to it.

G. Discount Plans

(T)

Carrier offers discounts based on the term of Customer's commitment to Carrier's service. Customers may subscribe to Frame Relay III Service for term plans for one, two or three years. The Monthly Revenue Commitment will be determined by the total Monthly Recurring Charges (MRCs) before discounts. Discounts apply to MRCs for ports, PVCs (UNI, NNI, management), and Virtual NNI Ports. Discounts do not apply to local access facilities, NRCs, or expedite fees. (C)

For any term plan, the rates and term plan discounts will be fixed for the term at the discounts listed in this section, applicable when Customer subscribes to the service. The term will begin on the in-service date for the first circuit in the network.

3.15 Frame Relay IV Service (Continued)

Unless otherwise noted, the following rates and charges will remain in effect for the full term of Customer's contract.

A. Local Access Facilities

Carrier will establish access arrangements on behalf of Customer when Full Service Frame Relay IV Service is purchased.

Under the terms of the Full Service Agreement, Carrier will order access facilities. Coordination of installation, maintenance, repair, test and turn-up will be coordinated by Carrier with the company(ies) supplying the access services. Customer will be billed for the access at Carrier's costs. Any special construction or non-standard charges assessed by the company supplying the local access, or by the underlying provider connecting to the access provider, will also be the responsibility of Customer.

1. Local Access Coordination Charges

- Access Coordination Charges are applied on a per-access line basis.
- Access Coordination Charges are waived for contract terms greater than one year.

Nonrecurring Local Access Coordination Charges

DS-0	\$ 25
DS-1	50
DS-3	100

B. Low Speed Frame Relay Rate Schedules (DS-1 speed and below)**1. Low Speed National UNI Port**

Charges include a Monthly Recurring Charge (MRC) based on the speed of the port connection (i.e., 56 Kbps to 1.536 Mbps). Charges apply per UNI port for each frame relay access facility to the network supporting Frame Relay IV Service. Each port can accommodate multiple PVCs. A port added to the network after initial installation will be considered a new element and the total network MRC will be adjusted incrementally for that port. This interface transports data traffic to and from Customer's facilities to Carrier's network for transport to, for example, other Customer facility locations.

5. Allowable CIR

The allowable CIR for any PVC is based on the lower speed of the two Frame Relay ports at either end of the PVC. This speed is termed the Line Speed. The allowable CIR for Low Speed Frame Relay is 75% of the Line Speed. For example, on a PVC with a 384 Kbps port and a 256 Kbps port, the Line Speed for determining the allowable CIR would be 256 Kbps. For this PVC, the highest allowable PVC/CIR would be 192 Kbps.

6. Maximum Burst

The Maximum Burst is the highest allowable bandwidth available on a PVC. The Maximum Burst available on a Low Speed PVC will be to the Line Speed, which is the lowest speed of the ports at either end of the PVC.

SECTION 3 - RATES AND CHARGES - LONG DISTANCE (Continued)

(N)

3.15 Frame Relay IV Service (Continued)**B. Low Speed Frame Relay Rate Schedules (DS-1 speed and below) (Continued)****7. Oversubscription (Booking Factor)**

Oversubscription occurs when the bandwidth of multiple PVCs are provisioned to a single port and the total of their CIR values exceeds the transmission speed for the port. The allowable Oversubscription is 300%. For example, a 64 Kbps port may have as much as 192 Kbps of PVC/CIR provisioned to that port.

For UNI ports provisioned with Oversubscription, the total available bandwidth for all PVCs is limited to the transmission speed of the port. During any given one-second interval, the total bandwidth available for CIR and Burst performance across all PVCs provisioned to a single port is limited to the capacity of the port, the port speed. Oversubscription should only be used in cases where the bursty nature of Customer's applications and simultaneous bandwidth demand permits such practice.

C. High Speed Frame Relay IV Service**1. National High Speed Frame Relay UNI Port**

Charges include a MRC based on the speed of the port connection (i.e., 4 Mbps to 44.736 Mbps). Charges apply per port for each frame relay access facility to the network supporting Frame Relay IV Service. Each UNI port can accommodate multiple PVCs. A port added to the network after initial installation will be considered a new element and the total network MRC will be adjusted incrementally for that port.

2. National High Speed Frame Relay NNI Port

The NNI port provided herein is not available where Customer LAN connectivity is required. When such LAN connectivity is required and facilities are available, Carrier will enter negotiations with Customer to provide an NNI port through an ICB arrangement.

4. National High Speed PVC - NNI-NNI PVC, NNI-UNI PVC, UNI-UNI PVC

Charges for each High Speed PVC are based upon the CIR. A PVC added to the network after initial installation will be considered a new element and the total network MRC will be adjusted incrementally for that PVC.

SECTION 3 - RATES AND CHARGES - LONG DISTANCE (Continued)

(N)

3.15 Frame Relay IV Service (Continued)**C. High Speed Frame Relay IV Service (Continued)****5. Allowable CIR**

The allowable CIR for High Speed Frame Relay IV is 50% of the Line Speed. For example, on a PVC with a 6 Mbps port and a 10 Mbps port, the Line Speed for determining the allowable CIR would be 6 Mbps. For this PVC, the highest allowable PVC/CIR would be 3 Mbps.

6. Maximum Burst

For PVCs from 2 Mbps to 22 Mbps, which will always be provisioned between two High Speed Frame Relay (HSFR) ports, the Maximum Burst is 2 x CIR. For this parameter, the B_c , Committed rate, and the B_e , Excess rate, will be configured as equal variables ($CIR = B_c = B_e$, equal parameters). For example, a 4 Mbps PVC can burst to 8 Mbps and a 12 Mbps PVC can burst to 24 Mbps.

For circuits between two High Speed Frame Relay ports with Low Speed PVCs, the following burst rules apply:

- For PVCs with CIR of 1.152 Mbps or less, the Maximum Burst is 1.536 Mbps.
- For PVCs with CIR equal to 1.536 Mbps, the Maximum Burst is 2 times 1.536 Mbps.

7. Oversubscription (Booking Factor)

Oversubscription occurs when the bandwidth of multiple PVCs are provisioned to a single port and the total of their CIR values exceeds the transmission speed for the port. The allowable Oversubscription is 300%. For example, a 6 Mbps port may have as much as 18 Mbps of PVC/CIR provisioned to that port.

For UNI ports provisioned with Oversubscription, the total available bandwidth for all PVCs is limited to the transmission speed of the port. During any given one-second interval, the total bandwidth available for CIR and Burst performance across all PVCs provisioned to a single port is limited to the capacity of the port, the port speed. Oversubscription should only be used in cases where the bursty nature of Customer's applications and simultaneous bandwidth demand permits such practice.

D. Additional Charges**1. Expedite Fee**

Carrier may offer expedites for Frame Relay IV Service. Carrier does not guarantee a shortened installation interval will be achieved for every accepted expedite request. The expedite charge will be \$425.00 per node and will be applied to the first bill rendered for the circuit even if a shortened installation interval was not achieved.

E. Discount Plans

Carrier offers discounts based on the term of Customer's commitment to Carrier's service. Customers may subscribe to Frame Relay IV Service for term plans of one, two, three, and five years. The Monthly Revenue Commitment together with the term of the contract will determine the amount of the discount. The sum of the NNI and UNI ports, PVCs, and Access MRCs and the Expedite fees before discounts is the Monthly Revenue Commitment. Discounts do not apply to local access facilities, NRCs, or expedite fees.

For any term plan, the rates and term plan discounts will be fixed for the term of the contract at the discounts listed in the table below, applicable when Customer subscribes to the service. The term will begin on the in-service date of the first circuit in the network.

SECTION 3 - RATES AND CHARGES - LONG DISTANCE (Continued)

(N)

3.15 Frame Relay IV Service (Continued)**F. Other Discounts****1. NRC Waivers**

NRCs will be waived for all standard term contracts equal to or greater than one year for Ports and PVCs. NRCs are waived for Access Coordination charges for contract terms greater than one year. NRCs for Access Coordination on a one-year contract are specified in Section 3.15 A. 1.

NRC charges may be applied for Moves, Adds, and Changes (MAC) within one year of the normal termination of a contract. Additional circuits added during the contract will be incorporated into Customer's term plan and will have the same termination date as Customer's original plan, provided they are installed prior to the last 12 months of the contract.

G. Contract Expiration

Upon contract expiration, the Carrier may continue service with charges at the expired contract rates or may apply tariff rates on a month-to-month basis until a new contract agreement is executed. Should the Customer choose to terminate service, the Customer must provide written "Termination of Service" notification to the Carrier 30 days prior to discontinuation of the service. Should the Customer choose to commit to another term plan, the rates of that plan will then apply.
